

Currently a Firefighter making my career change into the world of technology. I first experienced coding by accident when I was at university through my degree in Media Technology. Since then, my curiosity for technology expanded when I realised how it can positively change lives by providing people with access to information and resources that they would not otherwise have, this makes me very captivated by digital products. I have a desire for Software Engineering, a passion for creating pioneering applications and fascination for all things tech.

A flexible and adaptable person that ensures maximum productivity, strategic and creative thinking. Excellent time management skills with an eye for detail. A very resilient individual gained from experience from the Fire and Rescue Service, this can be adapted to everyday life and projects.

Technologies, Languages and Professional Skills

- React
- React Native
- Next.js
- Tailwindcss
- Node JS
- Jest
- TDD
